

## Coil Vase & Slab Pot with Lid and Natural Handle

### Coil Vase:

Using the coiling method, create a coil vase. It needs to reach at least 10 inches high.

	A	B	C	D-F
<b>Coil/ Construction Technique</b>	Coils have been uniformly created and connected to achieve a desire shape. The 10 inch requirement is met.	Coils have mostly been uniformly created and connected to achieve a desire shape. The 10 inch requirement is met.	Coils have somewhat been uniformly created and connected to achieve a desire shape. The 10 inch requirement is nearly met.	Coils have not been uniformly created or connected to achieve a desire shape. The 10 inch requirement is not met.
<b>Surface Quality</b>	The surface quality has been perfected through shape and through smoothing.	The surface quality has been mostly perfected through shape and through smoothing.	The surface quality has been worked on carefully through shape and through smoothing.	The surface quality has not been worked on carefully through shape and through smoothing.

### Slab Pot with Lid and Natural Handle:

1. Using the slab method you will create a pot. You have two options for the shape: a cube shape or rectangular bottom with a coil top.
2. You will enclose the shape and smooth, then use the wire tool to cut the lid.
3. You will then finish the lid with a lip so that it doesn't slide off.
4. Create holes to allow for the Natural handle.
5. After all firing is complete: use twine or raffia, etc. to tie a stick to the top for a handle.

	A	B	C	D-F
<b>Slab Construction Technique</b>	Proper slab technique was used to create a solid even structure.	Slab technique was used to create a mostly solid even structure.	Slab technique was used to create a somewhat solid even structure.	Proper slab technique was not used to create a solid even structure.
<b>Surface Quality</b>	The surface quality has been perfected through shape and through smoothing.	The surface quality has been mostly perfected through shape and through smoothing.	The surface quality has been worked on carefully through shape and through smoothing.	The surface quality has not been worked on carefully through shape and through smoothing.
<b>Finishing/ Overall Effect</b>	The lid was properly fit to the pot and the choice of glaze and finishing handle embellishments is aesthetically pleasing.	The lid was mostly properly fit to the pot and the choice of glaze and finishing handle embellishments is tasteful.	The lid was somewhat properly fit to the pot and the choice of glaze and finishing handle embellishments is tasteful.	The lid was not properly fit to the pot and the choice of glaze and finishing handle embellishments is not tasteful.
